

Landserv ...Delivering Sustainable Environmental Solutions

Landserv

A family owned and operated consultancy, Landserv has provided environmental services to business, industry and government organisations since 1993.

Lasting the distance

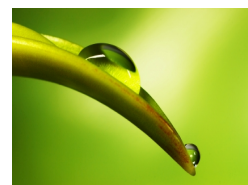

At Landserv we balance the needs of our clients and stakeholders with those of ecological communities and future generations, to provide enduring solutions. Increasingly our clients demand balanced outcomes, which we encourage them to promote as good news stories.

Our Logo

The gastropod from Jan Juc in Victoria is about 25 million years old. It reminds us to protect and sustain our earth forever.

To Landserv it also symbolises the robust solutions we provide to make our impact a positive one.

Keeping it simple

Our niche environmental services are delivered knowing that great solutions need not be complex. Often innovation and efficiency are inspired by nature's living examples.

Contaminated Land Assessment

Landserv specialises in the assessment of land contamination, including oil industry retail, depot and refinery sites, railway and ports infrastructure, "brownfields" industrial and "greenfields" sites. Whether assessing for statutory environmental audit purposes or as part of a property due diligence, our investigations seek efficient answers and solutions to constraints, reported concisely for all to understand.

Environmental Impact Assessment and Approvals

Development proposals on any scale need to consider the possible environmental effects and demonstrate that potential impact will be managed. Whether your project requires environmental assessment for a planning permit application, a works approval, or assessment to mitigate risks and impacts for peace of mind, Landserv specialises in managing multi-disciplinary teams to prepare and deliver successful approvals. EIA is not intended to provide a veto over a project and if constraints are identified, Landserv takes care to work through sustainable solutions with its proponent clients, regulatory authorities and stakeholders.

Environmental Management Plans and Systems

EMPs and EMS' are essentially tools for delivering environmental improvement, for example to your firm as a whole, or to the project you are about to embark on. Landserv personnel have developed EMPs for large scale remediation and major infrastructure projects, Environmental Improvement Plans for landfills and EMS' for large multi-use Defence bases and weapons ranges.

Environmental Auditing

To verify your organisations' performance, Landserv conducts environmental audits against the performance standards outlined in your EMP or EMS. This is an important service we perform for operations or construction projects, without which your EMP may be left on the shelf, resulting in no environmental improvement. Landserv is also able to inspect your facilities and examine your organisation to identify key environmental risks and advise on managing those. Director Damien Chappell is approved under the Port Services Act 1995 to certify and audit Port Safety and Environmental Management Plans.

Strategic Advice

Do your directors need to identify and manage the key environmental risks faced by your organisation? Whether you need to understand opportunities and constraints to your project, or wish to optimise the use of potentially contaminated land, Landserv can assist your organisation to meet your environmental challenges and make the right decisions
